INDUSTRY STRUCTURE AND DEVELOPMENT

The Indian economy has emerged rapidly from the slowdown caused by the global financial crisis of 2007-09 and remains one of the fastest growing economies of the world. After dipping to 6.8% in 2008-09, GDP growth had recovered sharply to 8% and is projected to remain above this level in 2010-11. Economic and financial events over the year, however, have increased concerns about the sustainability of the growth momentum.

The global economic and financial situation is recovering slowly. The large fiscal deficits and high debt ratios coupled with slow economic growth have created unsettling conditions for business and have potential for causing great volatility in financial markets. It is hard to visualize strong economic growth in the advanced economies in 2010 and to a large extent in 2011. The implications of this, for India's strategy to return to the 9.0 per cent growth trajectory, are that public policy must promote business confidence and facilitate increased investment.

Apart from above, high current account deficit, particularly in the context of weakening capital inflows, was also a cause of concern, which has hitherto managed to compensate the rising trade deficit. The current account deficit was a manifestation of strong domestic demand and global weakness. This pressure has abated somewhat during the past few months, with rise in exports and slowing (non-oil) imports. However, a strong rebound in India's exports over the past couple of months has considerably reduced the pressure, but India's overall balance of payments remains weaker than expected, putting pressure on the Rupee.

OPPORTUNITIES & THREATS

The Fundamental drives of India's medium term growth prospects remain intact. However, global developments, in conjunction with Indian Policy responses to the concerns noted above, are likely to make 2011-12 a challenging year.

Global economic and financial conditions can be expected to remain adverse for some time, particularly in the aftermath of Japan's natural disaster. Once the current financial year and commodity volatility subsides, deeper structural factors are likely to slow down economic growth, particularly in developed economics. Fiscal consolidation in Europe and an excess supply overhang in the US will probably moderate growth in the second half, together with increasing expectations of policy rate rise to quell rising inflation.

In India, inflationary pressure are likely to persist and hence result in a further, though moderate, monetary policy tightening the impact of which will be increasingly visible, through rising borrowing costs, in fiscal 2012. Increasing savings, high interest rates, an expected lower rise in currency driven by lower food prices, are likely to help deposits to grow stronger in fiscal 2012. However, in light of inflationary pressures and rising interest rates, there is a likelihood that the credit growth momentum might slow in 2011-12.
